Canberra-style store: blueprint

Drawn from the model's own constants (src/shared), so these pages cannot differ from the 3D scene. Metres. A visitor entering stands at the glass front facing the bar; the +x wall is on their left.

What the references say

From the corners you set in the rectify tool (docs/blueprint/rectify.json): the side walls are about **3.35 times as long as they are high**, the back wall about **3.3 times as wide as high**, and you gave the wall height as **3 m**. That makes the shop about **10 m wide by 10 m deep by 3 m high**: close to square, and much smaller than the 16 x 15 x 3.8 m used before.

Dimensions

Part	Value	Source
Shop width x depth x height	10 x 10 x 3 m	Wall ratios 3.3 and 3.35 at your 3 m wall height
Table columns	x = -2.5, 0, 2.5	About a quarter of the width either side of the middle (photo)
Tables	1.05 wide x 1.9 long, three down each side column, two down the middle	About a tenth of the width across (photo); length assumed
Bench along each side wall	0.56 m deep, 8.6 m long, 0.95 m high	Photo; the bench sits at about 0.3 of the wall height
Service bar	5 m long x 0.8 m deep, 1.05 m high, 5 stools	Shortened to half the back wall at your request
Staff door	1.0 m wide, left of the bar as you face it (+x)	Your description
Entrance opening	3 m wide, middle of the glass front	Assumed [TK]
Back room	10 m deep, same footprint, two shelving rows, two repair benches	Your instruction

Where the scale is uncertain

- **The 3 m wall height is the one absolute number.** The photographs fix the proportions; everything in metres follows from it. If the real ceiling is higher, the whole shop scales with it.
- Table length, the entrance opening and the back room are assumptions.
- Wall features (lightboxes, bays, monitors) are placed by their proportion of the wall in the close-up photographs.

Tables: position and orientation

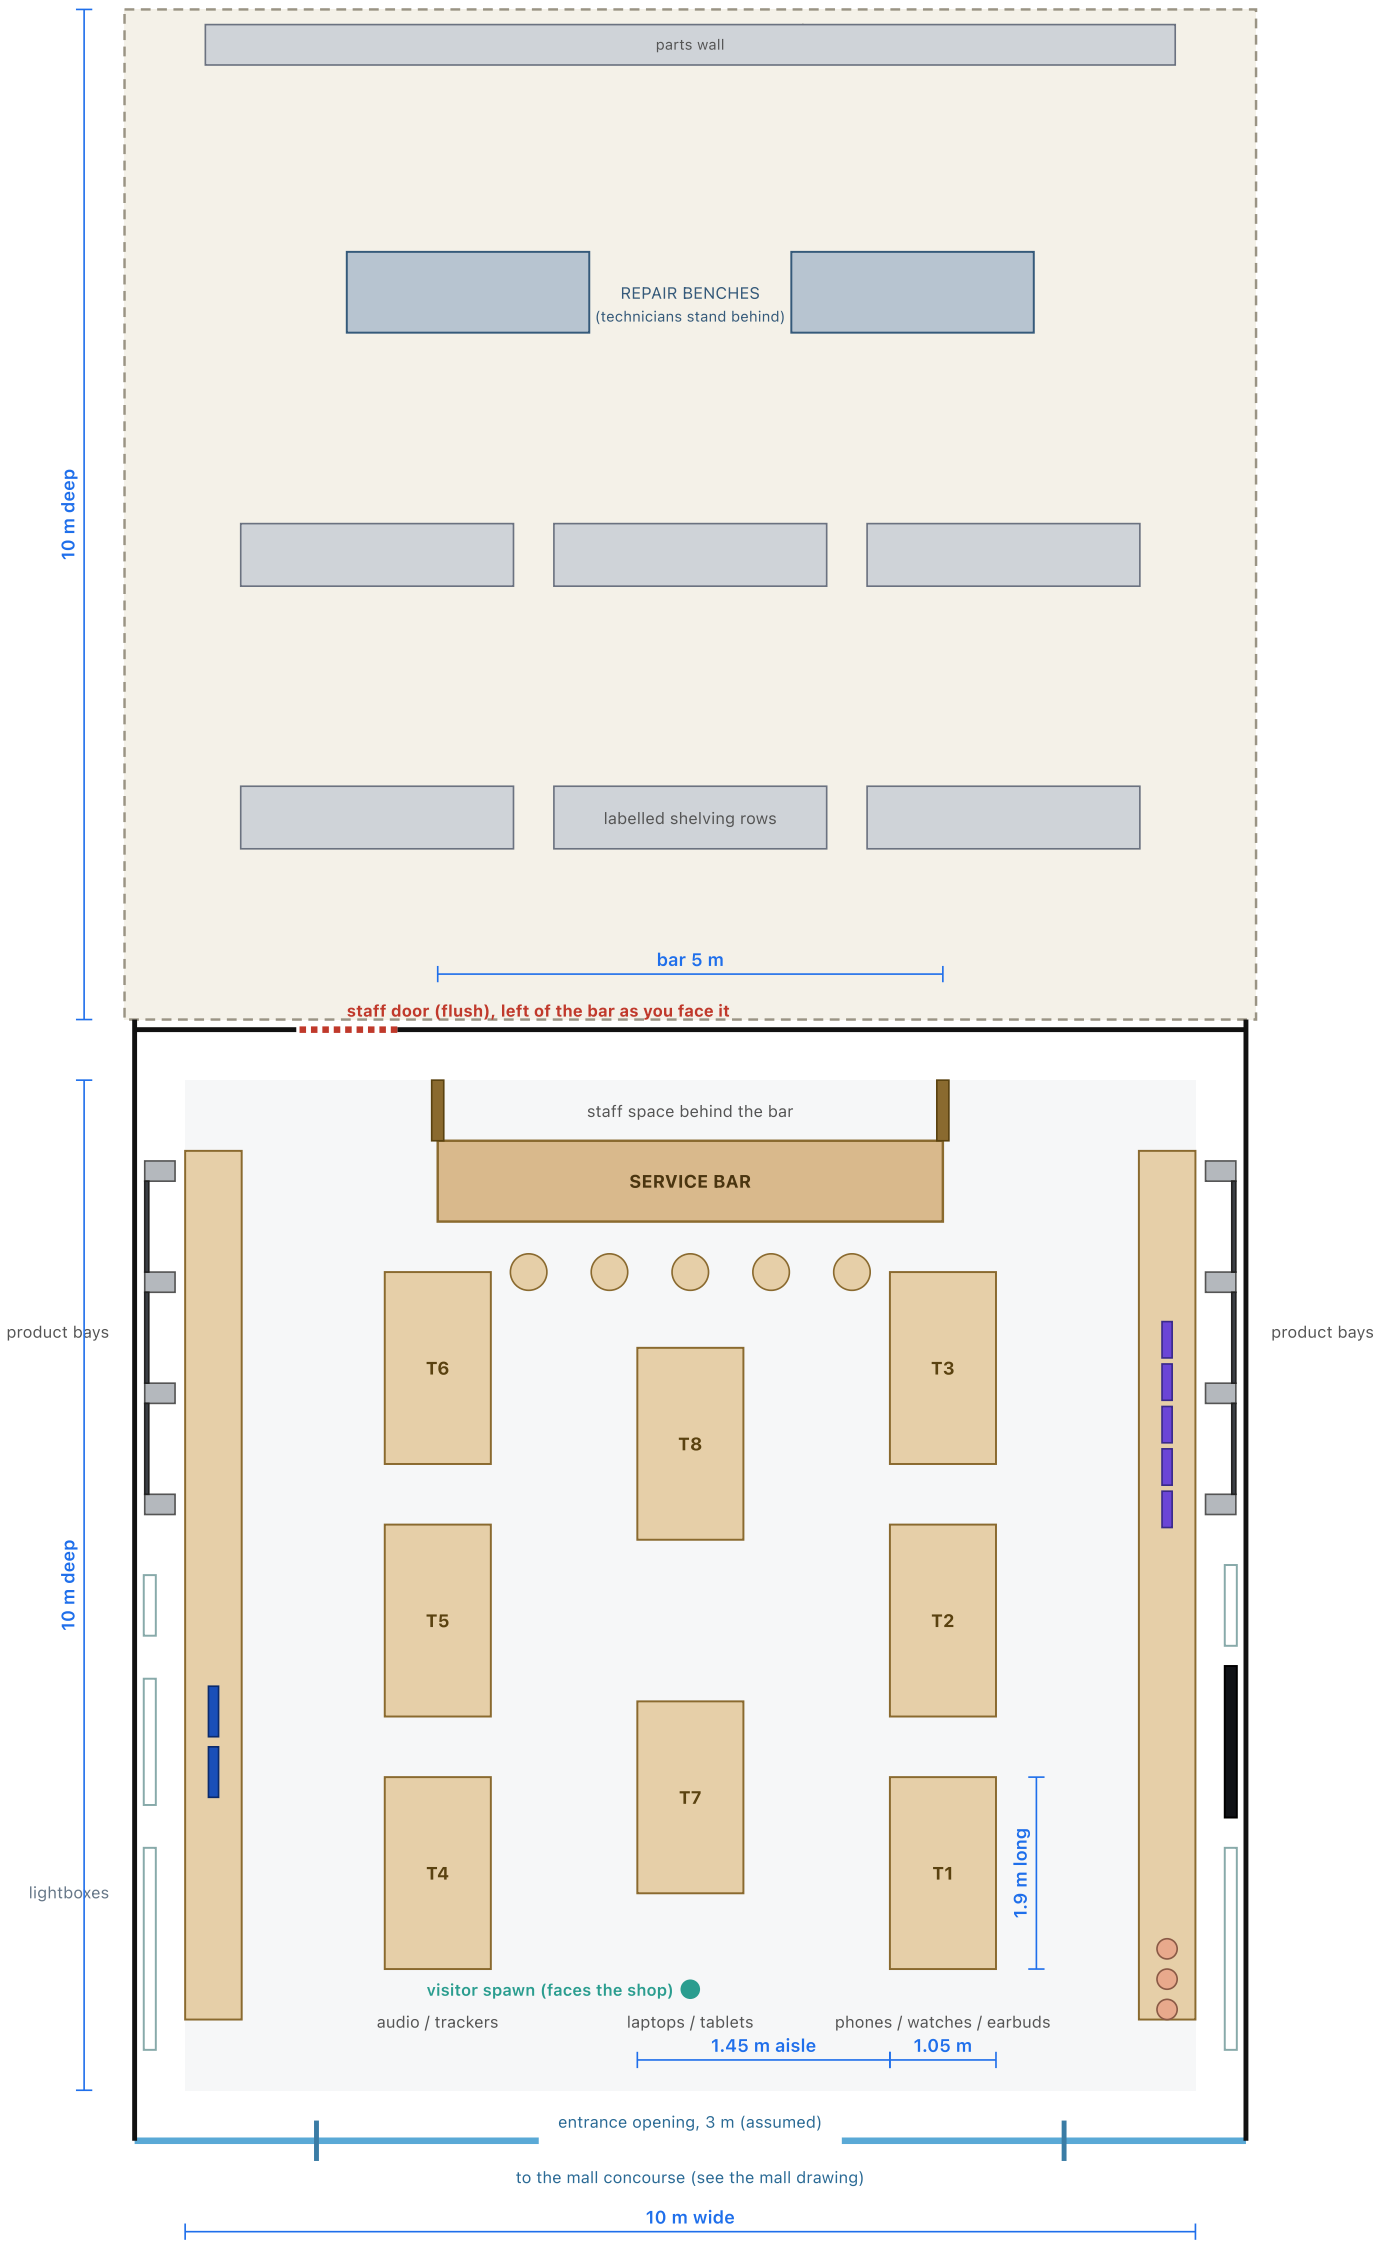

Every table runs **front to back** (long side parallel to the side walls, standing like rows in a column), three columns across: the left column, the centre column and the right column as you enter. There is no true top-down photograph of the tables, so positions come from the proportions of the reference photographs and the plan on the next page; orientation is the one thing the photographs show directly.

Table	Column	Centre x	Centre z	Size (across x long)	Long side runs	Stands on it
T1	right column (the -x side)	-2.50	-2.85	1.05 x 1.90	front to back (along z)	phones, watches, earbuds
T2	right column (the -x side)	-2.50	-0.35	1.05 x 1.90	front to back (along z)	phones, watches, earbuds
T3	right column (the -x side)	-2.50	2.15	1.05 x 1.90	front to back (along z)	phones, watches, earbuds
T4	left column (the +x side, as you enter)	2.50	-2.85	1.05 x 1.90	front to back (along z)	headphones, speakers, trackers, earbuds
T5	left column (the +x side, as you enter)	2.50	-0.35	1.05 x 1.90	front to back (along z)	headphones, speakers, trackers, earbuds
T6	left column (the +x side, as you enter)	2.50	2.15	1.05 x 1.90	front to back (along z)	headphones, speakers, trackers, earbuds
T7	centre	0.00	-2.10	1.05 x 1.90	front to back (along z)	laptops, tablets, tablets with keyboards
T8	centre	0.00	1.40	1.05 x 1.90	front to back (along z)	laptops, tablets, tablets with keyboards

z is negative towards the glass front and positive towards the bar. Products stand along both long sides of each table, facing outward, spaced at least 1 m apart so one person fits at each.

Top-down plan: the shop and the staff-only back room

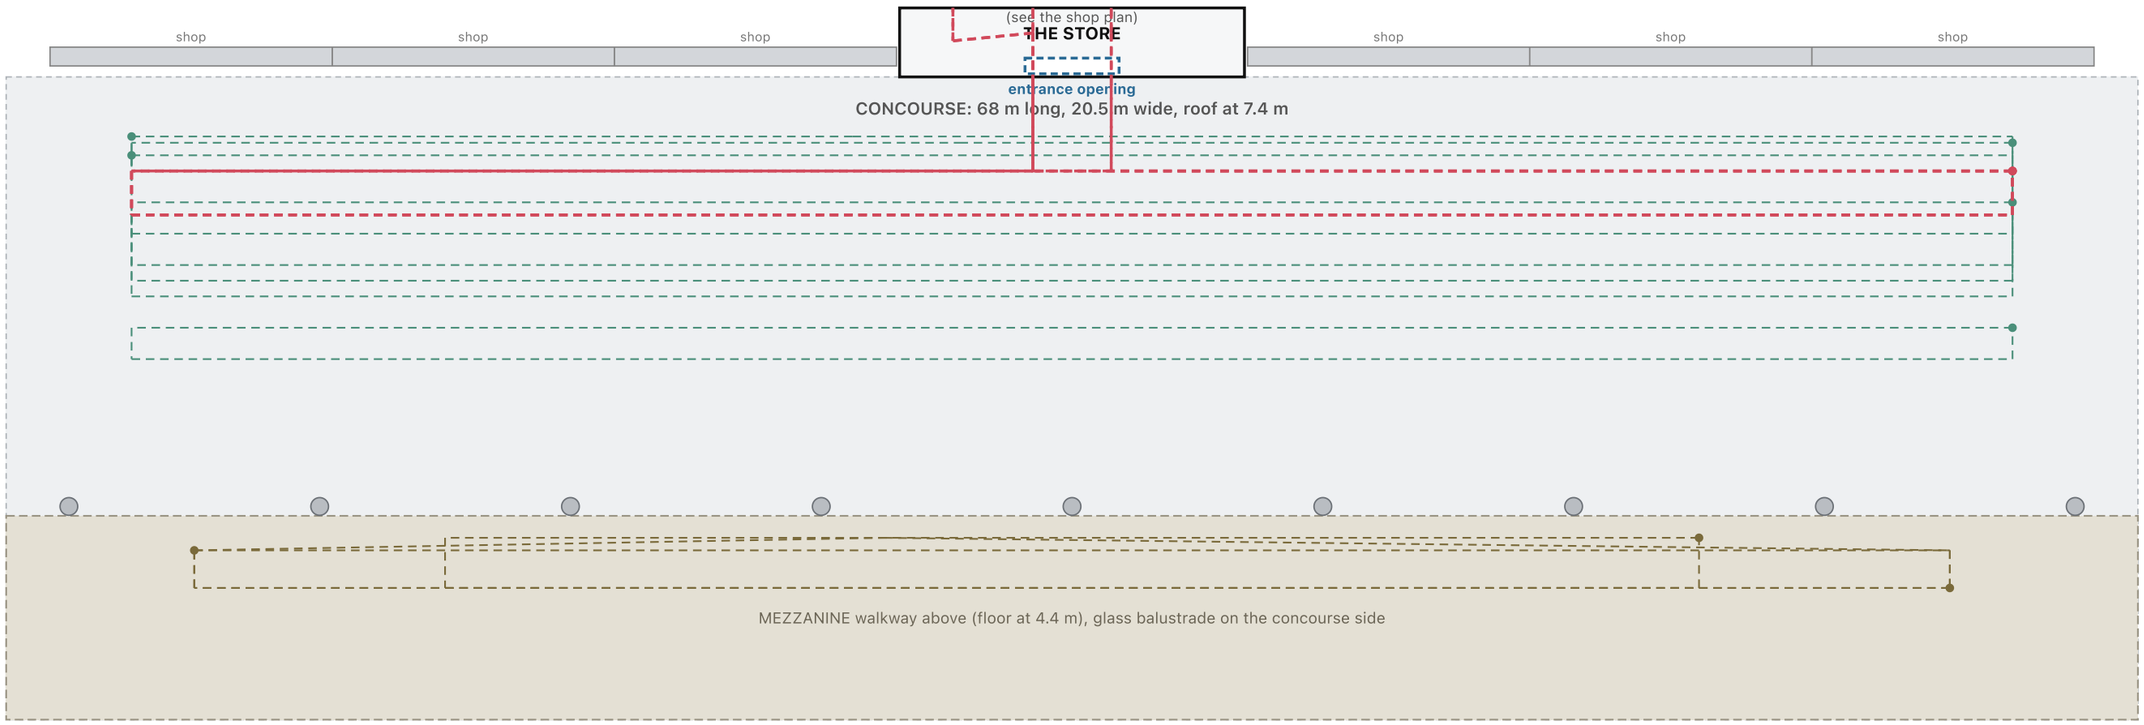

Floor plan, as a visitor sees it entering: +x wall on the LEFT, entrance at the bottom (metres)

Ceiling 3 m. Tables 1.05 wide x 1.9 long, four products each. Columns at x = -2.5, 0, 2.5.
Proportions from the rectified reference photographs (back wall 3.3 : 1, side walls 3.35 : 1); the 3 m wall height gives the metres.
Assumed, not measurable: table length, the entrance opening, the back-room layout (your instruction: same footprint), the door width.

Top-down plan: the mall around the store

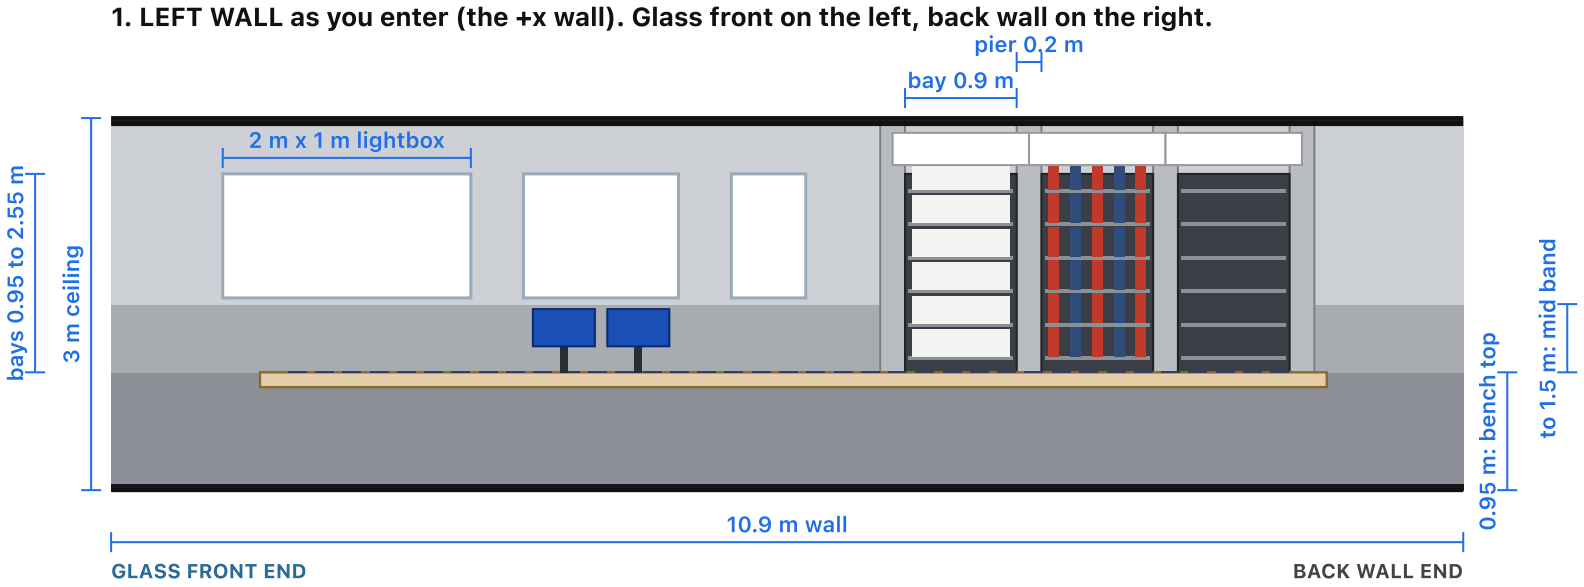

The mall around the store: concourse, shops, mezzanine and routes (metres; +x on the LEFT)

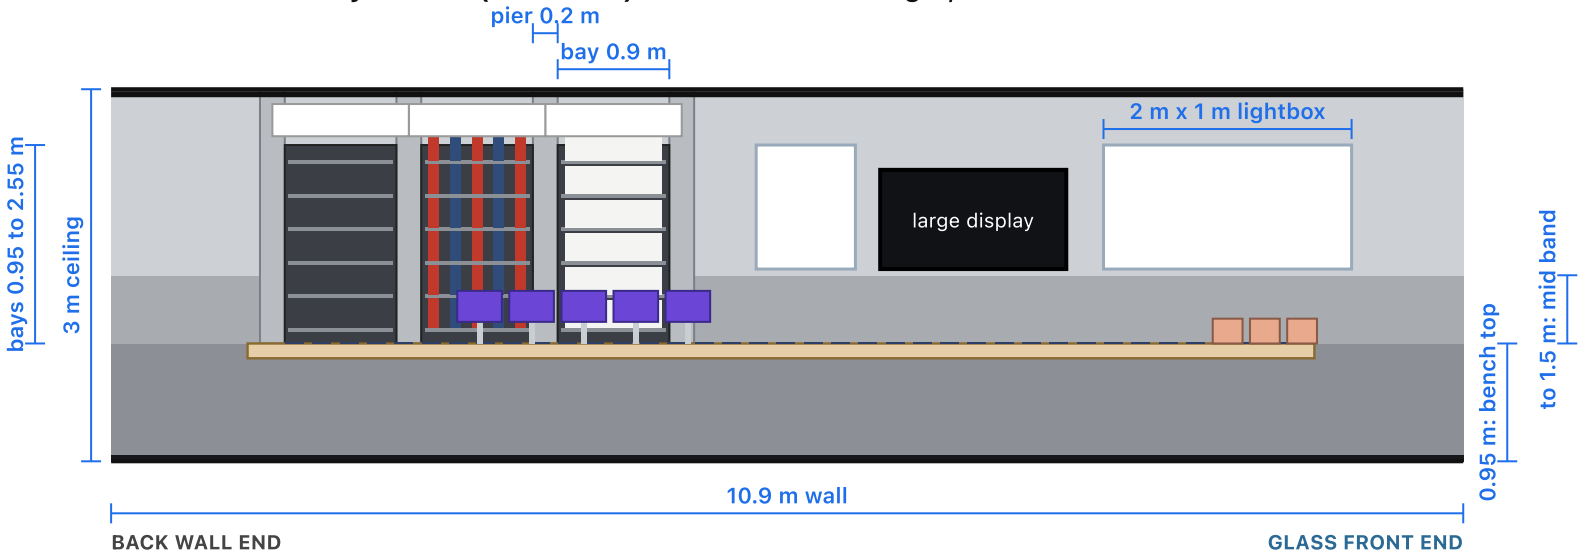

Green: people walking past (two stop to window-shop). Red: customers who come in through the opening, look at tables and leave. Olive: people on the mezzanine. Everyone is placed by the shared server clock, so all visitors see the same people in the same places. The mezzanine and neighbouring shops are not enterable.
Sizes of the concourse, the neighbours and the mezzanine are assumed; only the store itself comes from the reference photographs.

Walls: the side walls

1. LEFT WALL as you enter (the +x wall). Glass front on the left, back wall on the right.

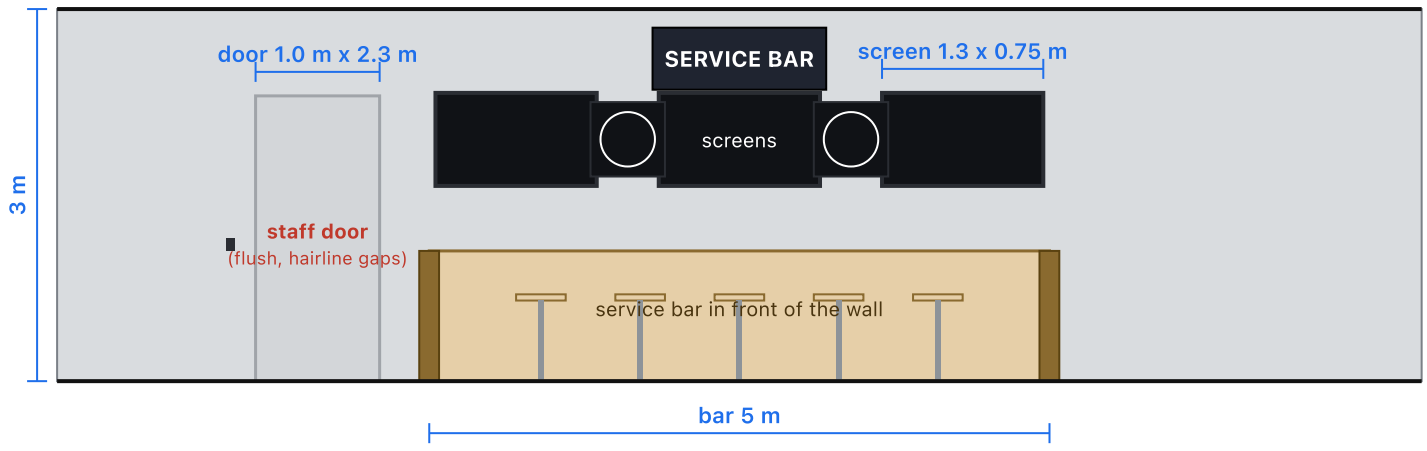

2. RIGHT WALL as you enter (the -x wall). Glass front on the right, back wall on the left.

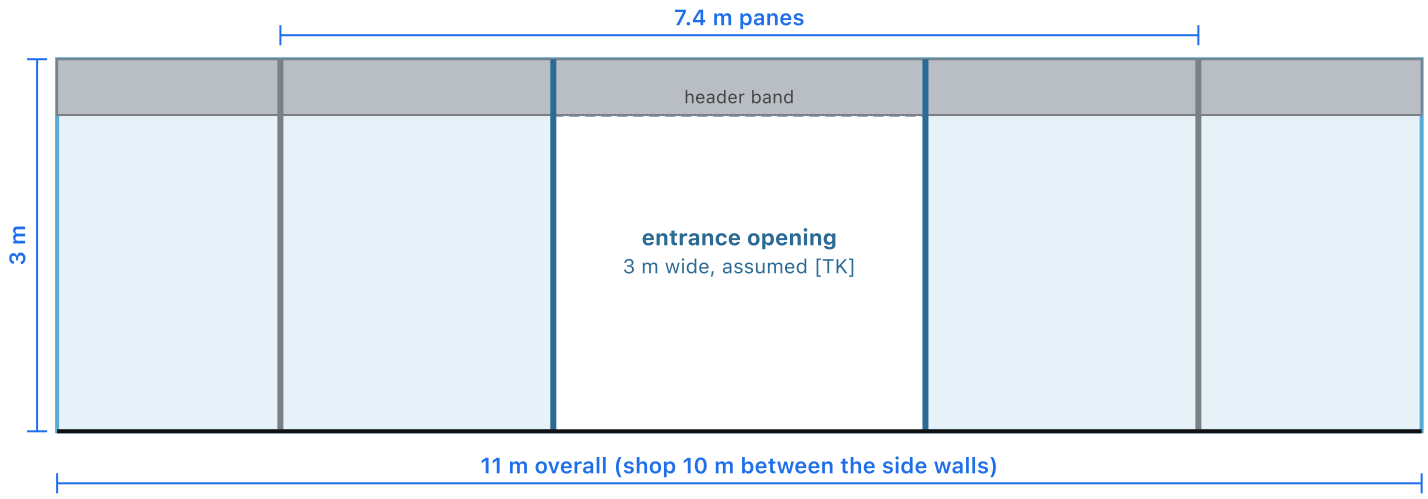

Walls: the back wall and the glass front

3. BACK WALL, shop side (z = +7.9), seen facing it. The +x side is on the left.

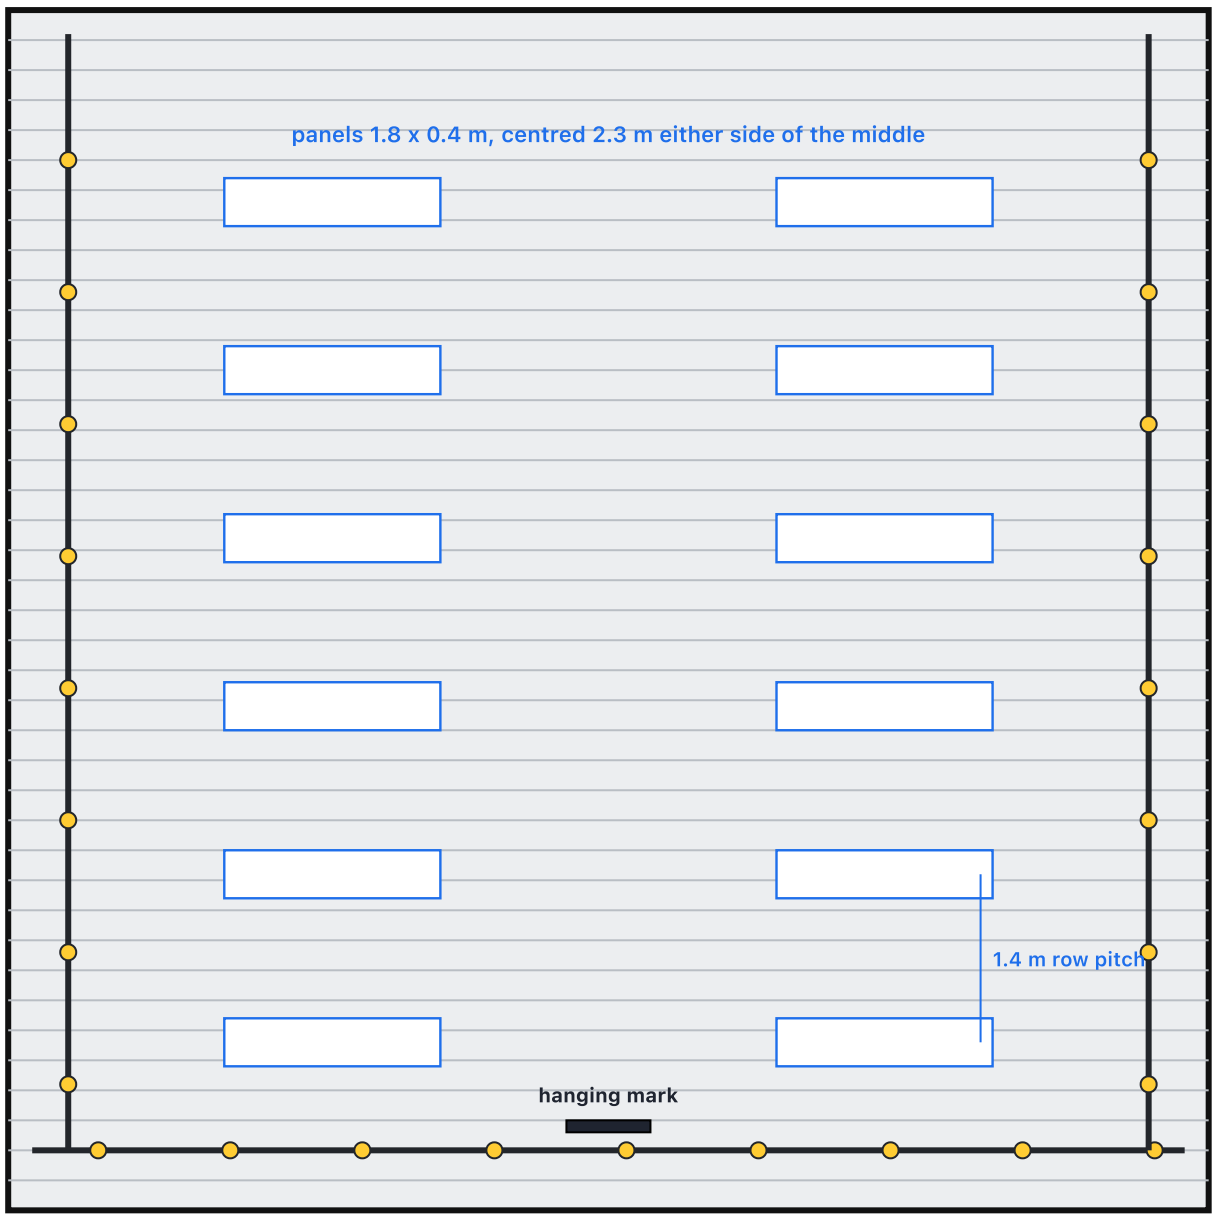

4. FRONT GLASS WALL (z = -8), seen from inside facing it. The +x side is on the right.

Ceiling and lights

Ceiling and lights, looking up from inside: +x wall on the LEFT, entrance at the bottom (metres)

Slats run across the room (along x) every 0.25 m. Spots every 1.1 m on rails 0.5 m in from the walls.
Ceiling height 3 m; the rails sit at 2.96 m. Panel rows read from the front-on photograph; the exact count is an estimate.
The hanging mark is an original service mark, not anyone's logo.
